

Model 2002 Natural Water Purifier

The Model 2002 replaces the Model 2001 Natural Water Purifier. The unit has been improved to allow connection to GFI protected power sources. The input power wiring is different. The unit operation remains the same as the Model 2001.

The input power is connected as shown below:

The circuit board has been modified to allow for selection of 115 vac or 220/240 vac input power. The unit is shipped set for 220/240 vac operation. Install the selection jumper on the circuit board connector J4 as follows:
