Natural Pure Water Systems

I-Zone Natural Purewater

Wailani[®] (y-lah-nee)

Izone[®] Natural Water Purifier

At Wailani Natural Pure Water systems, we innovate, design and bring you nature-friendly ways to keep your pool, spa or pond water fresh and crystal clean. Our unique *Izone*[®] methodology combines the natural purification processes of both ionization and ozonation to bring you silky smooth water that is pure as rainwater when it first leaves the clouds and begins its journey from the heavens.

Nature Makes It Look Easy. When you admire a beautiful clear blue lake, it's hard to imagine the complex processes Mother Nature uses to keep that water clean. Five factors are involved: circulation, filtration, water balance, sanitation and oxidation. The job is far more difficult in an enclosed pool than it is in a larger body of water in nature. Let's take a closer look at each of these to see just what must be done to keep your water clean:

- Circulation—Water must be adequately circulated through out the pool, spa or pond. The water should be turned over at least 1 1/2 times per day for a residential pool.
- Filtration—All plumbing, motors, filters, electrical and other equipment must be working together and functioning well.
- Water Balance—The pH, total alkalinity and hardness must be maintained at that perfect state that we call "Natural Pure Water", the smoothest silkiest water this side of heaven.
- Sanitation—It is of primary importance that all algae, bacteria and viruses are killed.
- Oxidation—Water must be freed from accumulated organic materials.

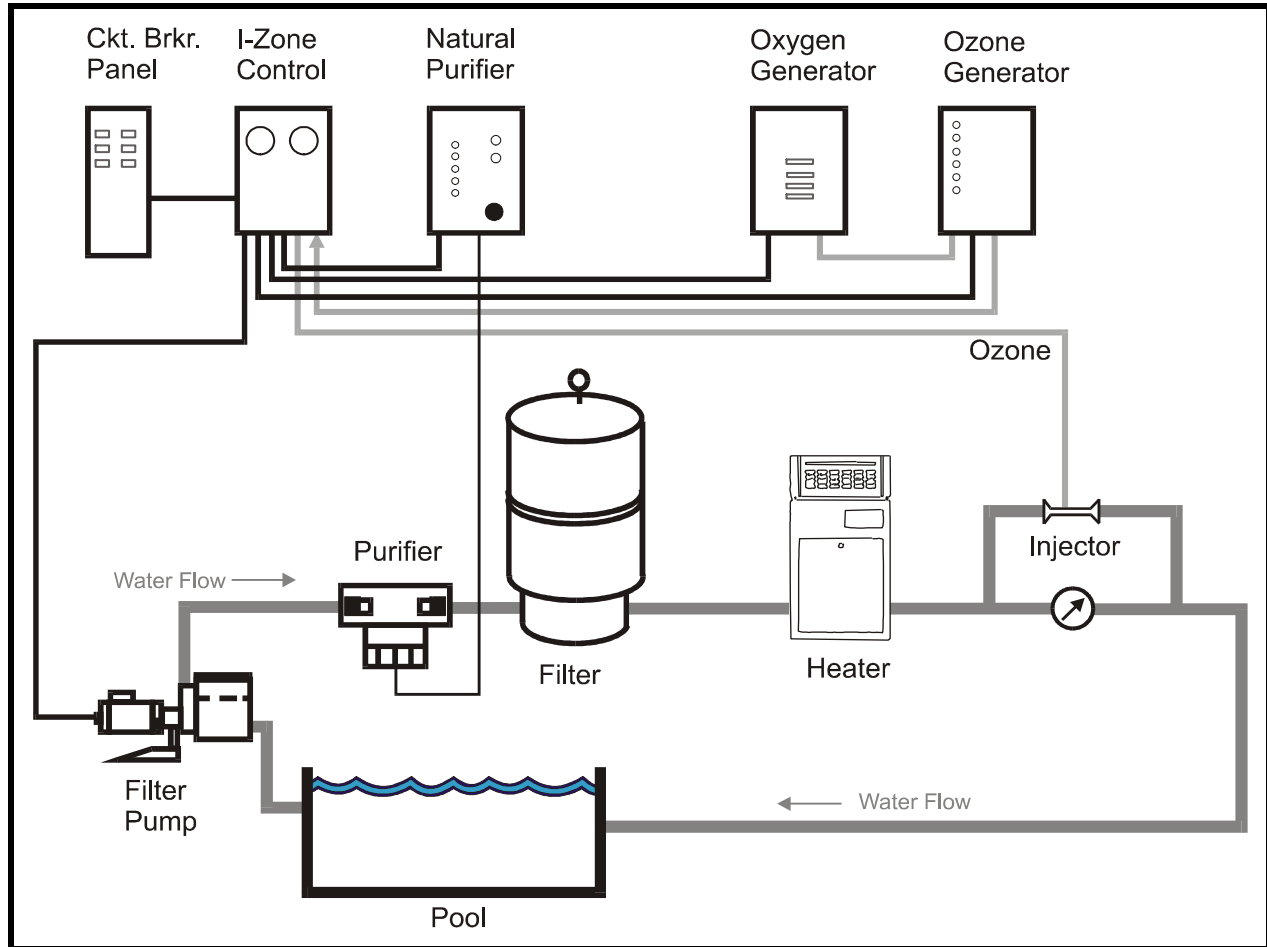

Is Swimming in Chemicals Really Necessary? In the past, the only reliable way to keep your pool clean was with gallons of extremely harsh chemicals like chlorine. Chlorine was necessary for both sanitation and oxidation. But, unfortunately chlorine causes stinging red eyes, dry skin, faded swimsuits, and smelly odors. And worse, it is difficult to handle, is often unsafe to swim in, and has even been deadly. This is why Wailani[®] Natural Pure Water Systems does not rely on dangerous chemicals, using ounces rather than gallons of chlorine.

How Does Wailani Do It? It wasn't easy and we didn't learn how overnight. We have been working over 25 years to develop our methods for sanitizing and oxidizing water. The ionization process has been used in Europe to help purify water since the 1930's. Our ionization process has been used since 1977 to eliminate algae, bacteria and viruses in upscale swimming pools, spas, fountains and ponds. Our Ozone process is recognized the world over as a cost efficient natural way to keep water crystal clear in everything from giant reservoirs to bottled water.

Only *Izone*[®] combines the best ionization and the best ozonation individually engineered to fit the specification of your pool, spa or pond.

Try it and you'll agree--swimming in Natural Pure Water makes all the difference in the world!

Typical Izone® Purification Installation

The Izone® Controller synchronizes and operates the following equipment when one circulation pump exists:

- Pool Circulation Pump
- Natural Water Purifier
- Ozone Generator with Air Dryer

- Ozone Generator with Oxygen Generator
- Ozone Protection Solenoid Valve
- Pool Remote Control System (Compool, Jandy, etc.)
- Optional 3-way Valve Actuator
- Optional ORP Controller
